PROFESSIONAL SUMMARY

Data engineer with experience in large-scale SQL systems, Retrieval-Augmented Generation (RAG) pipelines, statistical modeling, Machine Learning (ML) and time series data. Skilled in end-to-end development from data ingestion to AI integration, with a strong foundation in computer science.

TECHNICAL SKILLS

- **Languages:** Python, JavaScript, TypeScript, SQL
- **Proficient in** Pandas, NumPy, SciPy, Matplotlib, Flask, Django
- **Worked with** PyTorch, opencv, socket, Selenium, sqlite3, oracledb, openai, ollama
- **Databases:** Oracle, MySQL, SQLite
- **Frontend / UI:** HTML5 Canvas, Streamlit, Jinja, StencilJS
- **Developer Tools & Platforms:** Docker, Git, SSH, phpMyAdmin, PowerShell, Bash
- **Concepts:** RAG systems, AI agents, statistical modeling, time series data, data visualisation, Machine learning, Feature Engineering, Hypothesis testing

---

EDUCATION

B.Tech in Computer Science and Engineering, IIT Gandhinagar
CGPA: 9.59 out of 10
Dean's List in semesters 2, 4, 5, and 6
Relevant Courses: Machine Learning, Introduction to Data Science, Databases, Computer Networks, Software Tools and Technologies, Probability Statistics and Data Visualisation

---

PROFESSIONAL EXPERIENCE

Data Intern, Texas Instruments - May 2025 to July 2025

- **Text2SQL** - *June 2025 to July 2025*
  - Conducted an in-depth literature review of Text-to-SQL and Large Language Models (LLM) based database querying approaches.
  - Developed a metadata-free Retrieval-Augmented Generation (RAG) pipeline for column retrieval from enterprise SQL databases, handling **thousands of columns** and approximately **1 billion data points** without relying on metadata.
  - Designed a system to estimate the "importance" of database columns for improved retrieval relevance.
  - Built LLM-powered agents for table search, task decomposition, and SQL generation.
  - Created a Streamlit application with StencilJS-inspired components and Redux-style state management via OOP in Python.
  - Focused on scaling my Text2SQL application despite lack of metadata, which led to developing a Jaccard Containment estimation technique suitable for large Oracle databases (see research section).
  - **Technologies:** Python, Oracle SQL, SQLite, LlamaIndex, OpenAI API, Streamlit, StencilJS
- **End-of-Life Report Automation**, - *May 2025 to June 2025*
  - Automated the analysis of electronic parts flagged for end-of-life status, replacing manual review and reducing time spent from multiple days to minutes.

  - Collaborated with business stakeholders to gather process requirements.
  - Read source code for SpringBoot projects to understand the working of API endpoints.
  - Reconstructed the same process using Oracle SQL queries.
  - Implemented a GUI for the automation script and packaged it as an executable
  - Solved many small issues of several employees related to SFTP and Docker.
  - **Technologies:** Python, Pandas, Oracle DB, Docker, StencilJS, SpringBoot, SFTP
- **Awards and Achievements**
  - **PPO:** (Joining on July 6th) for the role of Data Engineer (not bond based).
  - Presented in one of Tech-Fridays on topics such as Pandas and Numpy

Individual Contractor for Industry-facing FPGA project, MUSE lab, IITGN, May-July 2026

- FPGA implementation of Total Focusing Method for NDT Ultrasonic Testing application
- **Optimised by using dynamic programming, parallelism, pipelining, and streaming**
- **Industry-grade** frame rate of 30 fps for 128x128 pixel image using just one FPGA board.
- Software Assisted Configuration allowing for **flexibility and scalability**.
- **Custom link layer protocol** on top of Ethernet to reduce OS overhead.
- **Code handover** to Modsonic Instruments Manufacturing Company Pvt. Ltd.
- Possibility of **publication in future**.

Industry facing Research Internship, Computational Biology lab (CLOCK), IITGN, May-June 2026

- Did **exploratory data analysis (EDA)** on proprietary physiological **time-series data** provided by Ultrahuman
- Applied **data visualization** techniques to identify two clusters in the data, helping in identify a firmware changes
- **Regression**: Used cosinor analysis with auto-regressive noise to capture the Circadian Rhythm
- **Feature-Engineering**: new metrics for social jet lag (SJL) such as heart-rate-autocorrelation (HRA)

- **Statistical Inference**: Characterised acute SJL events using changes in HRA via t-tests, OLS regression, and other methods
- **Trained transformer ANN** for predicting HR, HRV and baselined against Cosinor Analysis
- Paper writing is in progress and will likely lead to **publication in next few months**

Freelance Full stack Web-Developer, WCL lab, IITGN, 25 May to 11 June 2026

- **New Website for Indian Drought Monitor**
- Created an interactive map showcasing CDI/SPI as a heatmap, using HTML5 canvas

- Created a **local server** for running **LLM inference** and a "Typst script to video" **automation pipeline** for summaries.
- Made a **secure backend** for **chatbot API endpoints** using **FastAPI and SQLite**.

Academic Projects

P4 based SRv6 and INT implementation and testing *(Computer Networks, IITGN, Oct-Dec 2025)*

- Built a P4-based PDP, implementing IPv6 Segment Routing and SFANT style INT
- Automated flow installation by running a **shortest path algorithm** on the controller.

ShuttleGo, a shuttle management system *(Databases, IITGN Jan-April 2025)*

- Created the **MySQL + Flask** application for a shuttle management system.
- Did a demonstration of the project once it was deployed using **phpmyadmin**.

AlgoLang, a custom PL, *(Compilers, IITGN Jan-April 2025)*

- Implemented the recursive descent parser, interpreter, compiler, and assembler for a dynamically typed, lexically scoped, and extensible P.L. in Python.
- Created an efficient virtual machine in C for executind bytecode
- Added a VS-code extension for syntax highlighting and a terminal-based interactive shell for the language.

Assamese News Corpus (Hugging Face Dataset) *(IITGN, Jan-Apr 2025)*

Extracted and curated a large-scale Assamese language corpus from online newspapers using Selenium and Hugging Face API.

Person Velocity Detection CV Model *(IITGN, 2024)*

- Used YOLO-based object tracking and head detection models for person tracking.
- Used projective geometry and OpenCV to finally estimate the velocity

Open Source Contributions to GAP and SageMath *(IITGN, Jan-Jun 2024)*

- Collaborated with the author of two research papers on group theoretic algorithms.
- Reported bugs in exsiting code and implemented said algorithms in GAP and SageMath.

Classical Machine Learning *(ES335, IITGN, 2023)*

- Implemented classic ML models like decision trees, with visualisations and ensemble models like random forests and used boot-straping, K-fold split, etc.
- Read on optimisation methods like Momentum, SGD, batch gradient descent, Adam, etc.

Personal Projects

- Automatic differentiation system with backpropagation and neural network layers.
- Computational Physics Blog based on the course PH 509 at IITGN
- Trace; a slide based, programmable drawing application with stylus support, able to animate 3D plots
- Winner of HackRush'25 hackathon held at IITGN for the computer architecture track

Articles and Papers

Pranav Joshi, "Sampling-Based Estimation of Jaccard Containment and Similarity." *arXiv preprint, 2025.*

- Developed statistical models, Bayesian inference techniques, and bounds for set similarity estimation similar to the Lincoln-Peterson population size estimator.
- Empirically validated the models using simulated data.
- Gave guidance of applying this method for large databases with a rate/batch limit for querying.
- Applications: embedding propagation for RAG pipelines, plagiarism detection, literature search.
